

Addition and Subtraction

- **Do they understand place value in 3 digit numbers?**
Can they explain that in 628, the value of the 2 is 20, and the value of the 6 is 600?
- **Can they partition 3 digit numbers into H, T and U?**
Can they explain that 357 is made up from $300 + 50 + 7$?
- **Do they know by heart + and - facts to 20?**
This is a desirable skill as opposed to an essential skill. Knowledge of these facts will make calculations more efficient.
- **Can they add/subtract mentally any pair of 2 digit numbers, using a strategy of their choice?**
*Can the children add $24 + 36$ using a strategy such as partitioning and recombining or counting on?
Can the children subtract $56 - 37$ using a strategy such as counting on or counting back?*
- **Do they have a good understanding of addition and subtraction?**
Do they understand that more than 2 numbers can be added together? Do they understand that addition can be done in any order but subtraction cannot? Do they have a good understanding of the vocabulary related to addition and subtraction?
- **Can they explain their strategy orally and record it using informal jottings?**
Through their explanations, do they show an understanding of the mathematics behind the strategies they use as opposed to simply applying the rules?

Addition

Year 2/3	Year 4	Year 5	Year 6
<ul style="list-style-type: none"> Secure Year 2 mental methods 	<ul style="list-style-type: none"> Begin starting with larger numbers Use example below order changed Increase to 3 digit numbers adding mentally, least significant digit first to reinforce understanding of place value. e.g. $\begin{array}{r} 274 \\ + 148 \\ \hline 12 \text{ (adding units mentally)} \\ 110 \text{ (adding tens mentally)} \\ 300 \text{ (adding hundreds mentally)} \\ 422 \text{ (recombining hundreds, tens \& units)} \end{array}$ Throughout the teaching of these methods introduce the children to: Adding several amounts e.g. Find the total of $83+256+4$ Addition of decimals—begin to add 2 or more 3 digit sums of money. Know that the decimal points should line up under each other, particularly when adding mixed amounts e.g. $\begin{array}{r} \text{£}4.21 \\ + \text{£}3.87 \\ \hline 8\text{p} \\ \text{£}1.00 \\ \hline \text{£}7.00 \\ \text{£}8.08 \end{array}$ Introduce compact written method $\begin{array}{r} 27 \\ + 46 \\ \hline 73 \\ 1 \end{array}$ '7+6 = 13, which is 10 and 3, 3 in the units, put the 1 in the tens column. 20 and 40 is 60 add the extra 10 is 70. The answer is 73.' 	<p>Recap compact written method</p> <ul style="list-style-type: none"> Compact written method $\begin{array}{r} 27 \\ + 46 \\ \hline 73 \\ 1 \end{array}$ '7+6 = 13, which is 10 and 3, 3 in the units, put the 1 in the tens column. 20 and 40 is 60 add the extra 10 is 70. The answer is 73.' Extend to 3 digit numbers $\begin{array}{r} 274 \\ + 148 \\ \hline 422 \\ 11 \end{array}$ '4 and 8 = 12, which is 10 and 2. Write the 2 in the units and put '1' in the tens, 70 and 40 = 110 add the extra 10 is 120, Write the 2 tens in the tens column and put the '1' hundred in the hundreds. 200 and 100 = 300 add the extra 100 is 400. The answer is 422. Extend to ThHTU + HTU Extend to decimals. Using the chosen method, add two or more decimal fractions with up to three digits and the same number of decimal places. Know that decimal points should line up under each other, particularly when adding or subtracting mixed amounts such as 3.2m + 350cm. For example: $\text{£}6.72 + \text{£}8.56 + \text{£}2.30$ $72.5\text{km} + 54.6\text{km}$ 	<p>If able ThHTU <u>+ThHTU</u></p> <ul style="list-style-type: none"> Introduce adding several numbers with different number of digits e.g. $\begin{array}{r} 7654 \\ 52 \\ 654 \\ \hline 8 \end{array}$ Extend to decimals Extend to decimals Using the chosen method, add two or more decimal fractions with up to four digits and either one or two decimal places. Know that decimal points should line up under each other, particularly when adding or subtracting mixed amounts, such as 14.5kg + 750g E.g. $124.9 + 7.25$ $401.2 + 26.85 + 0.71$
<ul style="list-style-type: none"> Children should be able to add some pairs of 2 digit numbers mentally reasonably comfortably and record their mental method e.g. $27 + 46$ $20 + 40 = 60$ $7 + 6 = 13$ $60 + 13 = 73$ or  			
<ul style="list-style-type: none"> Then introduce expanded written - same thing, but different layout $\begin{array}{r} 27 \\ + 46 \\ \hline 60 \text{ (adding tens mentally)} \\ 13 \text{ (adding units mentally)} \\ 73 \text{ (recombining tens \& units)} \end{array}$ Adding the most significant digits first, links directly to what happens mentally. This stage needs to be modelled and explained to the children but they may not spend much time practising this method before going on to the next stage. 			
<ul style="list-style-type: none"> Change to adding the least significant digits first saying, 'Does it matter if we add the units first? Let's try.' $\begin{array}{r} 27 \\ + 46 \\ \hline 13 \text{ (adding units mentally)} \\ 60 \text{ (adding tens mentally)} \\ 73 \text{ (recombining tens \& units)} \end{array}$ 			

Subtraction

Year 2/3

- Children need to be able to subtract a 2 digit number from a 2 digit number mentally and record their method.

$$\begin{array}{c}
 \text{+2} \qquad \text{+30} \qquad \text{+4} \\
 \text{28} \quad \text{30} \qquad \qquad \text{60} \quad \text{64} \\
 \text{e.g. } 64-28 \\
 64-30=34 \\
 34+2=36
 \end{array}$$

$$\begin{array}{c}
 \text{-8} \qquad \qquad \text{-20} \\
 \text{36} \quad \text{44} \qquad \qquad \text{64}
 \end{array}$$

- They should also be able to partition numbers in tens and units e.g. $64 = 60 + 4$ and a multiple of ten and a teens number e.g. $64 = 50 + 14$
- Extend to HTU using number line HTU - TU HTU - HTU
- Introduce vertical layout. Ensure the examples do not require exchange:

$$\begin{array}{r}
 68 \rightarrow 60 \quad 8 \\
 -24 \rightarrow -20 \quad 4 \\
 \hline
 44 \quad \quad 40 \quad 4
 \end{array}$$

Year 4

- Recap introduction of vertical layout** Provide e.g. Where exchange is necessary.

$$\begin{array}{r}
 50 \\
 64 \rightarrow \cancel{60} \quad 14 \\
 -28 \rightarrow -20 \quad 8 \\
 \hline
 36 \quad \quad 30 \quad 6
 \end{array}$$

Introduce expanded written methods - this can be usefully supported using multibase apparatus.

"4 subtract 8 is difficult but we can make it easier by using 10 from the 60 (leaving 50) and making 14 by adding the 10 to the 4. 14 subtract 8 is 6, 50 subtract 20 is 30. Put together the 30 and 6. The answer is 36.

- Increase to three digit numbers**

$$\begin{array}{r}
 60 \\
 274 \rightarrow 200 \quad \cancel{70} \quad 14 \\
 -157 \rightarrow -100 \quad 50 \quad 7 \\
 \hline
 117 \quad \quad 100 \quad 10 \quad 7
 \end{array}$$

"4 subtract 7 is difficult. We can make it easier by using 10 from 70 (leaving 60) and making 14 by adding the 10 to the 4. 14 subtract 7 is 7. 60 (which is left in the tens) subtract 50 is 10. 200 subtract 100 is 100. The answer is 117.

- Using similar methods, begin to find the difference between two 2-digit sums of money. Know that the decimal points should line up underneath each other.

$$\begin{array}{r}
 80 \\
 \pounds 8.95 \rightarrow 800 \quad \cancel{90} \quad 15 \\
 -\pounds 4.38 \rightarrow -400 \quad 30 \quad 8 \\
 \hline
 \pounds 4.57 \quad \quad 400 \quad 50 \quad 7
 \end{array}$$

Year 5

- Recap expanded method HTU**

$$\begin{array}{r}
 60 \\
 274 \rightarrow 200 \quad \cancel{70} \quad 14 \\
 -157 \rightarrow -100 \quad 50 \quad 7 \\
 \hline
 117 \quad \quad 100 \quad 10 \quad 7
 \end{array}$$

- Extend to include exchanges from hundreds to tens, and from hundreds to tens to units. E.g.

$$\begin{array}{r}
 200 \quad 90 \\
 306 \rightarrow \cancel{300} \quad \cancel{100} \quad 16 \\
 -148 \rightarrow - \quad 40 \quad 8 \\
 \hline
 158 \quad \quad 100 \quad 50 \quad 8
 \end{array}$$

"6 subtract 8 is difficult. We can make it easier by using 10 from the tens column. Oh, there aren't any tens so we'll move to the hundred column, 300 are there, subtract 100 leaving 200. We'll put that hundred in the tens column and then move ten into the units column..."

- When children are confident, introduce compact method - begin with two 2-digit numbers. E.g.

$$\begin{array}{r}
 51 \\
 64 \\
 -28 \\
 \hline
 36
 \end{array}$$

"4 subtract 8 is difficult. Take 10 from 60 and add it to the 4. 14 subtract 8 is 6. Subtract 20 from 50 to get 30. The answer is 36."

- Subtracting decimal numbers with up to 3 digits and the same number of decimal places. Know that the decimal points should be aligned. E.g. $72.5 - 4.6$

Year 6

- Recap compact method for TU-TU. Extend for HTU-TU** (ensure digits are aligned)

$$\begin{array}{r}
 \text{Increase to three digit numbers e.g.} \\
 \text{61} \\
 273 \\
 -157 \\
 \hline
 116
 \end{array}$$

"3 subtract 7 is difficult. Take 10 from 70 and add it to the 3. 13 subtract 7 is 6. 60 subtract 50 is 10. 200 subtract 100 is 100. The answer is 116."

- Continue to use this compact method for subtractions involving larger numbers (ThHTU) e.g.

$$\begin{array}{r}
 31 \\
 6467 \\
 -385 \\
 \hline
 6082
 \end{array}$$

- Extend to decimals.** Using the chosen method, subtract 2 or more decimal fractions with up to 3 digits and either 1 or 2 decimal places e.g. $14.24\text{kg} - 8.7\text{kg}$. Encourage the children to use zero as a place holder.

$$\begin{array}{r}
 31 \\
 14.24\text{kg} \\
 -8.70\text{kg} \\
 \hline
 5.54\text{kg}
 \end{array}$$

Multiplication and Division

- **Can children partition numbers into multiples of 100, multiples of 10 and units?**
Do children know that 387 is $300 + 80 + 7$?
- **Do they understand 0 as a place holder?**
Do children understand that for example, when 7 is multiplied by 10, 0 is used to hold the place and show that nothing is there?
- **Can they multiply mentally one-, two- or three- digit numbers by 10, then 100 and explain the effect?**
Do children understand that when multiplying by 10 or 100, digits move to the left of the decimal point and when dividing by 10 or 100 digits move to the right of the decimal point?
- **Do they know by heart multiplication facts for at least the 2, 3, 4, 5 and 10 times tables?**
This knowledge is desirable as opposed to essential, as knowledge of these facts will make calculations more efficient?
- **Do they know the outcome of multiplying by 0?**
Do children understand that when a number is multiplied by 0, the answer will be 0?
- **Can they multiply mentally, say, 14 by 5 using a strategy of their choice?**
Could children partition 14 into 10 and 4, multiply each part by 5 and recombine? Or multiply by 10 and halve?
- **Can they explain their strategy orally and by using informal jottings?**
Through their explanations, do they show an understanding of the mathematics behind the strategies they use as opposed to simply applying the rules?

Multiplication

Year 2/3

Multiplication by 10 and 100

- Children should be reasonably comfortable with multiplying single digit numbers by single digit numbers (they might not have instant recall of all multiplication facts but should be able to derive some facts reasonably quickly).
- Understanding that digits move one/ two place(s) to the left, use of a zero(s) to hold the place(s).
- They should be able to use single digit multiplication facts e.g. 3×4 to calculate single digit \times multiple of 10 e.g. 0×4 and partition numbers into tens and units.
- Doubling multiples of 5 and 10.
- Multiplying 2 digit multiples of 10 by 2, 3, 4, 5 or 10.
- Multiplying 2 digit numbers by 2, 3, 4 or 5 without crossing the 10s boundary.
- Partitioning - using the distributive law e.g. $12 \times 4 \rightarrow (10 \times 4) + (2 \times 4)$
 $40 + 8 = 48$
- $43 \times 5 \rightarrow 200 + 15 = 215$
- Grid layout - same method slightly different layout
- $17 \times 3 =$

x	10	7	
3	30	21	=51

Add mentally

Year 4

Revise Grid layout

- Grid layout** - same method slightly different layout

$$17 \times 3$$

x	10	7	
3	30	21	=51

- Extend to numbers where the answer bridges 100.**

$$38 \times 6$$

x	30	8	
6	180	48	=228

Add mentally

- Ensure that place value cards are used throughout teaching.

- Extend to 2 digit by multiple of 10**

$$42 \times 30$$

x	40	2	
30	1200	60	=1260

Add Mentally

Year 5

Recap - 2 digit by multiple of 10

- Extend to 2 digit by 2 digit**

$$34 \times 27$$

x	30	4	
20	600	80	680*
7	210	28	238*
			918

* add these mentally if possible

- Extend to 3 digit**

$$HTU \times U$$

x	300	50	4	
6	1800	300	24	

$$354 \times 6 = 2124$$

- Work mentally to complete written questions e.g.

$$0.7 \times 5 =$$

$$0.2 \times ? = 1.8$$

- Introduce multiplying with one decimal place.**

- Decimal fractions**

$$\text{e.g. } 3 \times 2.6 =$$

- Lots of oral work - to 1 decimal place.**

x	2	0.6	
3	6	1.8	= 7.8

Year 6

Recap

$$34 \times 27$$

x	30	4	
20	600	80	680*
7	210	28	238*
			918

- Same calculation different layout**
 34×27 (introduce vertical layout)

34	
27	
210	(7 \times 30)
28	(7 \times 4)
600	(20 \times 30)
80	(20 \times 4)
918	

MORE ABLE PROGRESS TO COMPACT METHOD

- Compact method - same calculation different layout**

$$34 \times 27$$

34	
X 27	
238	(7 \times 34)
680	(20 \times 34)
918	

- Decimals** Approximate first - multiply number to 2dp by a single digit number.

$$2.53 \times 4$$

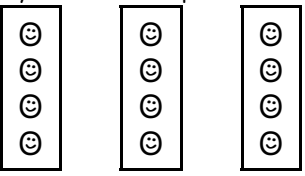

$$2 \times 4 = 8.00$$

$$0.5 \times 4 = 2.00$$

$$0.03 \times 4 = \underline{0.12}$$

$$10.12$$

Division

Year 2/3	Year 4	Year 5	Year 6
<ul style="list-style-type: none"> • Division by 10 and 100 • Children should be able to divide numbers by 10 and 100 mentally, understanding the place value implications. They should be able to halve numbers and be beginning to understand relationship between \times & \div such that division facts can be derived from multiplication ones. $10 \div 2 = 5, 5 \times 2 = 10$ • Sharing They should have experience of sharing  • Grouping And of grouping (repeated subtraction) $12 \div 3 =$ "how many 3's make 12?" They should be able to work out examples such as $12 \div 3$ by rephrasing as how many 3's make 12 then counting up in multiples of 3 to 12: 3, 6, 9, 12. $4 \times 3 = 12$ The idea of repeated subtraction: 'how many ___ make ___' is carried through to the formal written method - 'chunking' - which is repeated subtraction of the divisor and multiples of the divisor • Model with a simple calculation to link to mental $12 \div 3$ $\begin{array}{r} 12 \\ -3 \quad (1 \times 3) \quad 4 \\ \hline 9 \\ -3 \quad (1 \times 3) \\ \hline 6 \\ -3 \quad (1 \times 3) \\ \hline 3 \\ -3 \quad (1 \times 3) \\ \hline 0 \end{array}$ <div style="margin-left: 150px;"> <p>'threes' have been taken away.</p> </div> 	<ul style="list-style-type: none"> • Revise vertical layout, taking only one chunk each time. $\begin{array}{r} 12 \\ -3 \quad (1 \times 3) \quad 4 \\ \hline 9 \\ -3 \quad (1 \times 3) \\ \hline 6 \\ -3 \quad (1 \times 3) \\ \hline 3 \\ -3 \quad (1 \times 3) \\ \hline 0 \end{array}$ <div style="margin-left: 150px;"> <p>'threes' have been taken away.</p> </div> • Introduce the idea of remainder i.e. not reaching 0 at the end linked to table facts. • Working alongside subtraction and tables work in mental oral starter. • Increase size of numbers so that chunking written method is more efficient than counting up. subtract any 'chunk' that the child knows but suggest the 10th multiple as a known fact. E.g. $68 \div 4 =$ 'how many 4's make 65?' • A useful task is to get the children to brainstorm chunks they know first - a bank of known or derived facts to work from. This will enable children to remove larger chunks at a time. E.g. $2 \times 4 = 8$ 56 How many 4's have been subtracted? $4 \times 4 = 16$ -40 (10 x 4) $? = 14$ $10 \times 4 = 40$ -16 (4 x 4) • Introduce remainder to above e.g. $73 \div 5$ How many 5's make 73? 73 $\begin{array}{r} 73 \\ -50 \quad (10 \times 5) \\ \hline 23 \\ -20 \quad (4 \times 5) \\ \hline 3 \end{array}$ 	<ul style="list-style-type: none"> • Extend short division (division by a single digit) to include HTU \div U. Use divisors that are being focused on in the multiplication work. E.g. $256 \div 7$ • Encourage children to estimate first and to brainstorm 'chunks' of the divisor to develop a bank of known and derived facts. E.g. $10 \times 7 = 70$, therefore $20 \times 7 = 140$ and $30 \times 7 = 210$ $\begin{array}{r} 256 \\ -70 \quad (10 \times 7) \\ \hline 186 \\ -140 \quad (20 \times 7) \\ \hline 46 \\ -42 \quad (6 \times 7) \\ \hline 4 \end{array}$ <p style="margin-left: 100px;">$256 \div 7 = 36 \text{ r. } 4$</p> • Now introduce the compact form for short division by encouraging children to take larger chunks. • Familiarise children with the notation of division (the roof) and record the answer on top. $\begin{array}{r} 36 \text{ r. } 4 \\) 256 \\ \hline -210 \quad (30 \times 7) \\ \hline 46 \\ -42 \quad (6 \times 7) \\ \hline 4 \end{array}$ 	<ul style="list-style-type: none"> • Introduce extended long division (division by a number greater than 9) Again brainstorm facts first e.g. $\begin{array}{r} 27 \\ 36 \quad) 972 \\ \hline -360 \quad (10 \times 36) \\ \hline 612 \\ -360 \quad (10 \times 36) \\ \hline 252 \\ -180 \quad (5 \times 36) \\ \hline 72 \\ -72 \quad (2 \times 36) \\ \hline 0 \end{array}$ • Then compact it by removing larger chunks - Compact Long Division $\begin{array}{r} 27 \text{ r. } 1 \\ 36 \quad) 973 \\ \hline -720 \quad (20 \times 36) \\ \hline 253 \\ -180 \quad (5 \times 36) \\ \hline 73 \\ -72 \quad (2 \times 36) \\ \hline 1 \end{array}$ • Then introduce this division method with decimals - depends on place value. Brainstorm facts first e.g. $\begin{array}{r} 12.5 \\ 7 \quad) 87.5 \\ \hline -70 \quad (10 \times 7) \\ \hline 17.5 \\ -14.0 \quad (2 \times 7) \\ \hline 3.5 \\ -3.5 \quad (0.5 \times 7) \\ \hline 0 \end{array}$
